## manroland AG – Newspaper Presses

09 March 2010

Results are based on a SOP for material resistance/corrosive potential and performed by a reference institute or self testing  
The SOP's can be downloaded at <http://www.fogra.org>

- **Plastic Part Testing**, includes an additional test with typical plastic parts used in the printing unit and rubber coverings of ink and dampening rollers. Founts which passed this test successfully are marked by a green indicator in this column.
- If the tests are not yet completed, the founts are marked by a yellow indicator in this column.
- If no plastic part test is in progress or a successful test was not submitted to our office the mentioned area in the form is not marked.
- After a successful introduction of the plastic part test in 01/2006 all new installed presses/orders since 01/2007 are obliged to run a fount that fulfills both, the corrosion and the plastic part criteria. In general we recommend our customers to use fountain solutions which fulfil both, the corrosion and the plastic part criteria to ensure the balance between performance and protection of the printing system.
