Ugra/Fogra Media Wedge CMYK V3.0

The standard variation extended, special variation XE for Epson printers

The standard variation of the Ugra/Fogra Media Wedge CMYK V3.0 was extended with the version 3.0b for automatic measurements. The size of the colour patches have been reduced to 7 mm x 7 mm. Due to reduction in size lesser margin space is needed and therefore this layout can help reduce costs on paper. When version 3.0b of the Media Wedge is evaluated, it is important that the measuring head is precisely positioned so that no false readings occur.

The special variation of the Ugra/Fogra Media Wedge CMYK V3.0 consists of three layouts that are specifically designed for the Epson printers. They can be evaluated inline and automatically by the integrated measuring devices of the printers. It is necessary that the correct target values be used depending on the type of measurement in accordance to the specifications of ISO 13655:2008.

Advice

The Media Wedge is essential for the professionally created contract proof and therefore, it is integrated into many proofing systems and RIPs as a licensed component.

In these cases, the evaluation of the Media Wedge indicates correct output in the workflow from RIP to print out. With only a RIP included Media Wedge it is not possible to obtain information about the correct handling of data through the whole workflow. For this reason, the Media Wedge should also be used as a digital control device for the evaluation of the complete workflow. This is necessary to observe the effects of image processing in the CMYK mode and other prepress processes. If this is done with an automated workflow and Epson printers, then the special variation XE in TIFF and EPS file formats is required as a separate licence.

Ordering

The new variations can be ordered from Fogra now.
