

Ugra/FOGRA PostScript Control Strip

Application:

Control of exposure and printing systems in computer publishing

Description:

The Ugra/FOGRA PostScript Control Strip determines, independently of the manufacturer, the most important reproduction properties of PostScript-compatible output units. A test image consisting of seven functional groups can, independently of the scanning resolution, be output on PostScript-compatible printers or expose units. The control strip is available only in digital form and is programmed in PostScript.

The „PS“ version is sent direct to the RIP or controller of the PostScript-compatible printer or expose unit. The „EPS“ (Encapsulated PostScript) version is suitable for import into a

page makeup program such as PageMaker, QuarkXPress, or FreeHand.

Both versions are supplied in one package.

The „PDF“ Version is used in a PDF-Workflow.

State when ordering:

Ugra/FOGRA PostScript Control Strip for EPS/PS-Version; PDF-Version; EPS/PS/PDF-Version.

State user name for personalisation purposes and platform (Macintosh or MS-DOS).

Price on request

(FOGRA members get a discount of 25 %)
